

1st circular of 7th Korea-China Joint Symposium on Advanced Steel Technology

August 26-28, 2015

Ramada Plaza Jeju Hotel, Jeju, Korea

OBJECTIVE

The symposium is intended to bring together scientists and engineers from Korea and China to have an insight into the latest developments in steel science and technologies, and provides a forum for exchange of ideas and opinions in the area of innovative, creative and challenging processes.

THEME

The theme of the workshop covers a broad spectrum in relation to

- High temperature physical chemistry
- Ironmaking
- Steelmaking (Solidification & Continuous Casting)
- Hot and Cold Rolling (Phase Transformation)
- Sustainable and environmental processing

As the workshop emphasizes the exchange of ideas and cross-fertilization among participants, it is encouraged not only to present a completed work, but also to bring up ideas which are not proved, but challenging, ongoing works which seek a peer advice, and technical or theoretical difficulties encountered during a particular research in progress.
